Tableau Practice - Retail Sales Dashboards

Project Report - Vaishnavi Lahoti

1. Objective

Build Tableau skills by designing interactive retail dashboards for trend and category analysis.

2. Project Overview

Practice project on public sample retail datasets: interactive dashboards with trend lines, category filters and drill-downs, built to develop Tableau fluency.

3. Dashboard Design Plan

1) Sales and profit KPIs 2) Monthly sales trend line with year filter 3) Category to Sub-Category drill-down 4) Regional profit comparison map/bar 5) Discount vs profit margin analysis 6) Action filters linking all views.

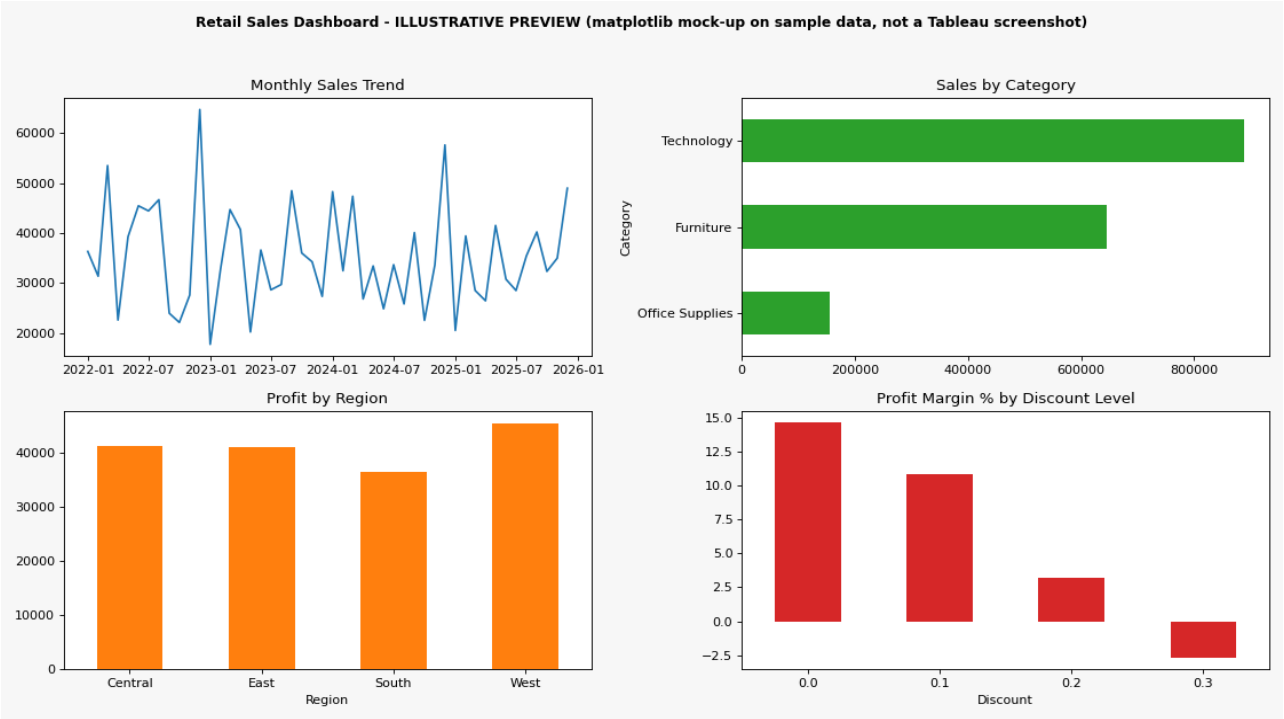

4. Tools & Techniques

Tableau (Public / Desktop), calculated fields, filters, parameters, drill-downs, dashboard actions; Excel for source data.

5. Illustrative Sample-Data Summary

On the 2,000-order synthetic sample (2022-2025): total sales 1,689,074, total profit 164,078. Technology and Office Supplies lead on profit margin; orders with 30%+ discount show a margin of -2.7% versus 14.6% for no-discount orders. These figures describe the sample file only and are not real business findings.

Category	Sales	Profit
Furniture	645,807	-1,993
Office Supplies	154,994	18,014
Technology	888,273	148,057

6. Repository Files

Retail_Sales_Sample_Data.xlsx (synthetic sample dataset); Dashboard_Preview.png (illustrative preview); this report; README.md.

7. Data Availability Note

The original practice datasets and Tableau workbooks were deleted and are unavailable. The Excel file in this repository is a synthetic sample created to mirror a public retail dataset structure. The preview image is a matplotlib mock-up, not a Tableau export. Replace it with a real Tableau screenshot when the dashboard is rebuilt.
